Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-28, drawn to a fitting removal tool, classified in class 29, subclass 259.
- II. Claims 29-33, drawn to a method of retracting a locking collar of a hydraulic fitting, classified in class 29, subclass 426.5.

The inventions are distinct, each from the other because of the following reasons:

The inventions are distinct, each from the other because:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus can be used to perform a different process. For example, the apparatus can be used to press fit an O-ring onto a shaft where the O-ring is received in an attacher and an adjustable actuator pushes the shaft relative to the O-ring.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
